

REDSUN

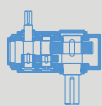

H&B Heavy duty gear units

08 / 2015

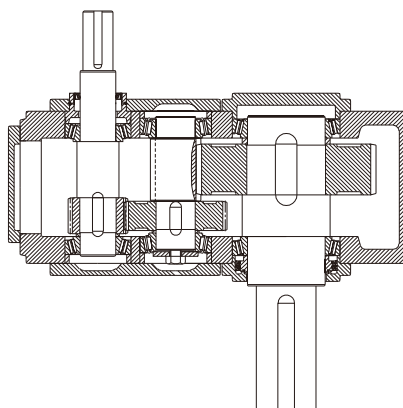

Note!

1. The structure scheme, appearance diagram and other attached diagrams in sample are examples, there is no strict proportion requirement. If you need exact dimension of certain types, please contact our sales dept.. (The unmarked dimension units are mm).
2. Gear unit has been tested before delivered, users should add lubrication oil before running.
3. We can only refer to the marked oil in the mannul. Actual oil filling level should be the same with the mark on oil immersion lens.
4. Lubrication oil viscosity should be selected according to working conditions and ambient temperature.
5. To prevent accidents, all the rotation parts should be added with protective covers according to safety regulation of the nation and region.

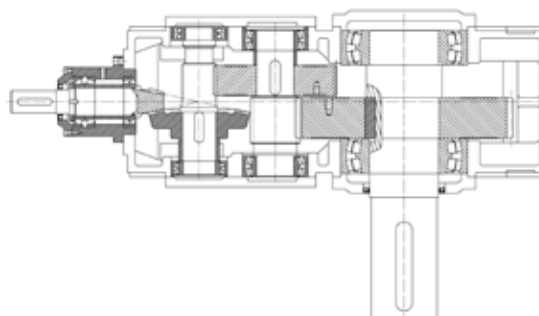

H.B structure:

H

B

HB

H.B type designation:

B

3

S

H

10

–

56 – A

H=Helical gear units
B=Bevel-helical gear units

Output shaft mode
S=Solid shaft
H=Hollow shaft with parallel key
D=Hollow shaft with shrink disc

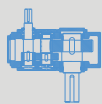

Size

Nominal ratio

Stages(1, 2, 3, 4)

Mounting modes
H=Horizontal
M=Horizontal design without feet
V=Vertical

Designs

Key to symbols:

ED=Duty cycle per hour

f1=Driven equipment factor(table 1)

f2=Prime mover factor

f3=Peak torque factor

f4, f5=Thermal factor(table 2, 3)

f6,f7=Altitude factor(table 4, 5)

f8=Vertical mounting gear units oil supply factor(table 6)

f9,f10, f11, f12=Thermal factor(table 7, 8, 9, 10)

a1=Size factor(table 11)

a2=Ratio factor(table 12)

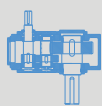

P1=Input power

PG1=Rated thermal capacity of gear unit without auxiliary cooling

PG2=Rated thermal capacity of gear unit with cooling fan

PG3=Rated thermal capacity of gear unit with cooling coil

PG4=Rated thermal capacity of gear unit with cooling oil and fan

HB Selection:

Steps	Description	Symbols	Parameters Calculation&Guidelines					
1	Driven equipment factor	f ₁	Refer to f ₁ table P05					
2	Prime mover factor	f ₂	Prime mover factor			f ₂		
			Electric motor, hydraulic motor, turbine			1.0		
			Piston engine with 4-6 cylinders, cyclic variation 1:100 to 1:200			1.25		
			Piston engine with 1-3 cylinders, cyclic variation 1:100			1.5		
3	Input speed	n ₁	Consult us if higher speed required					
4	Shaft arrangement	H、 B	H: Helical gear units; B: Bevel-helical gear units					
5	Calculation of the ratio	i	i=n ₁ /n ₂					
6	Transmission efficiency	η	single stage:98%, 2-stage:96%, 3-stage:94%, 四级4-stage:92%					
7	Confirm gear unit input power with torque or power needed by driven equipment	P ₁	P ₁ =T ₂ · n ₁ /(9550 · i · η) or P ₁ =P ₂ / η					
8	According to calculation, check transmission capacity table to determine gear unit size	T _{2N} 、 P _{1N}	T _{2N} ≥T ₂ · f ₁ · f ₂ (or) P _{1N} ≥P ₁ · f ₁ · f ₂ If it doesn't satisfy conditions:3.33·P ₁ ≥P _{1N} , Please consult us.					
9	Determine output mode		Output mode & mounting position					
10	Peak torque verification	T _A	P _{1N} ≥T _A · n ₁ · f ₃ /9550	f ₃	Load peaks per hour			
					1-5	6-30	31-100	> 100
				Single direction loading	0.5	0.65	0.7	0.85
				Alternate loading	0.7	0.95	1.10	1.25
11	After selecting connection mounting and accessories, check allowable strength of the shaft	Fr、 Fa	Radial load need to be checked when radial load imposed by belt pulley, chain sprocket and gear are present(See P05)					
12	Determine lubrication method, select lubrication oil		Horizontal mounting		Vertical mounting			
			Lubrication methods for selection: 1. Splash lubrication 2. Dip-in lubrication 3. Forced lubrication Shaft end pump lubrication Motor oil pump lubrication Oil station lubrication		Lubrication methods for selection: 1. Dip-in lubrication 2. Forced lubrication Shaft end pump lubrication Motor oil pump lubrication Oil station lubrication			
13	Determine cooling method		1. If it satisfies the following condition, the gear unit will not be equipped with auxiliary cooling device. 2. If it satisfies the following condition, the gear unit will be equipped with cooling fan. 3. If it satisfies the following condition, the gear unit will be equipped with cooling coil. 4. If it satisfies the following condition, the gear unit will be equipped with cooling coil and fan. 5. Gear unit can be equipped with other cooling devices: air-oil cooler, water-oil cooler, users can equip petrol station by themselves to provide circulated cooling oil.(Refer to P06 for f ₄ , f ₅ , f ₆ , f ₇ , f ₈ , f ₉ , f ₁₀ , f ₁₁ , f ₁₂)					

*Peak torque: maximum loading torque means the maximum torque caused by starting, braking or maximum pulse loading.
(Under common working conditions, peak torque is the maximum torque may occur when a machine starts or brakes)

Selection example

Known conditions:

Prime mover:

Motor power: 75kW

Motor speed: 1500 rpm

Maximum starting torque: $T_A=720 \text{ N}\cdot\text{m}$

Driven equipment(working machine):

Type: Belt conveyor

Required power: $P_2=72\text{kW}$ Speed: $n_2=26\text{rpm}$

Duty: 12 hours/day

Starts per hour: 10

Operating cycle per hour: 100%

Ambient temperature: 30

Place of installation: Outdoor mounting

Altitude: 500m

Bevel-helical gear unit

Horizontal mounting

Shaft arrangement form C

Selection procedure:

1. Calculation of ratio:

$$i=n_1/n_2=1500/26=57.7 \quad i_N=56$$

2.Determine rated power of gear unit

$$P_{1N} \geq P_1 \cdot f_1 \cdot f_2 = P_2 \cdot f_1 \cdot f_2 / \eta = 66 \cdot 1.3 \cdot 1 / 0.94 = 91.3 \text{ kW}$$

Refer to transmission capacity table B3, select size 9, $P_{1N}=96\text{kW}$

$$3.33 \cdot P_1 = 3.33 \cdot P_2 / \eta = 3.33 \cdot 66 / 0.94 = 233.8 \geq P_{1N} \quad \text{Satisfy requirements}$$

3. Peak torque verification:

$$P_{1N} \geq T_A \cdot n_1 \cdot f_3 / 9550 = 720 \cdot 1500 \cdot 0.65 / 9550 = 73.5 \text{ kW}$$

$$P_{1N}=96\text{kW} \geq 73.5\text{kW} \quad \text{Satisfy requirements}$$

4. Verify thermal capacity:

$$P_{G1} \cdot f_4 \cdot f_6 \cdot f_8 \cdot f_9 = 70.7 \text{ kW} \cdot 0.88 \cdot 1 \cdot 1 \cdot (1.23 - 2.8 \cdot 0.085 \cdot 0.15) = 74.3 \text{ kW}$$

$$P_1 = P_2 / \eta = 66 \text{ kW} / 0.94 = 70.2 \leq 74.3 \text{ kW} \quad \text{Thermal capacity is sufficient}$$

5. Determine gear unit type: B3SH9-56-C

Service Factor

Driven equipment factor				f ₁			
Driven equipment	Daily operating time with load(hour)			Driven equipment	Daily operating time with load(hour)		
	≤ 2	> 2-10	> 10		≤ 2	> 2-10	> 10

Transportation and rotation				Sand miller	1.25	1.25	1.50
Transportation							
Charging tray							
Plywood lathe drive	1.50	1.50	1.75				
Conveying chain, Lifting							

Note: 1. Determine required power P2 of the driven equipment;

*) Determine rated power according to maximum torque

**) The actual service factor should be selected according to accurate loading classification, for specific information, please consult us.

***) It is necessary to check thermal capacity.

2. The factors are experience value. The premise of using these factors is that the above mechanical equipment should conform to common design regulation and loading conditions. If there is special situation, please consult us.

3. For machines that are not listed in this table, please consult us.

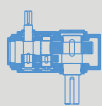

Table 2 Thermal factor f4					
Without auxiliary cooling or only with fan					
Ambient temperature	Operating cycle per hour (ED) in %				
	100	80	60	40	20

Note: Gear units installed in open field will avoid direct sunshine by equipping a shelter.

Permissible additional radial force on output shaft

Permissible additional radial force on output shaft d2:

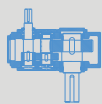

Permissible direction of force

Permissible additional radial force F_{R2} (kN), applied at mid point of extension of output shaft

Note:

1. If the angle of applied force and the direction of rotation are given, in most of cases, higher additional force can mostly allowed. Please consult us.
2. "*" upon request.
3. When the force is not applied at mid point of shaft, please refer to R09.
4. Lowest performance level of foundation bolt is 8.8. The foundation should be dry and grease free. If customers have requirements, radial force is allowed to be applied at input shaft d1. Please consult us.

Permissible additional radial force on output shaft d2:

Force is not applied at mid point of shaft extension of output shaft

$$F_{RZ2} = F_{R2} \times k$$

F_{RZ2} Permissible external radial force

F_{R2} Permissible additional radial force
Determined according to previous table

k Applied force factor should be
determined according to the following table

Applied force factor k

Suggested lubrication way:

Size 6 or under it: Compensation oil tank dip-in lubrication

Size 7 or beyond it: Forced lubrication

Lubrication method

Compensation oil tank dip-in lubrication:

When installing gearbox vertically, all the gear teeth and bearings are immersed in lubrication oil.

When temperature rises and lubrication greases expands, the space needed is provided by the additional oil box connected with gear unit by bolts.

Forced lubrication:

Forced lubrication includes flange pump or motor oil pump, filter, pipeline system.

Dip-in lubrication must meet following requirements.

a) Permissible oil temperature, see table 2.

a)Maximum input speed n_1 , see table 3.

Table 2		
Viscosity ISO-VG at 40℃ mm ² /s(cSt)	Permissible temperature for dip-in lubrication(℃)	
	Mineral oil	Synthetic oil
VG 220	- 15	- 25
VG 320	- 12	- 22
VG 460	- 9	- 25

If oil temperature is lower than above value, please heat oil before running.

Note: Forced lubrication is necessary if n1 or iN is not listed on above table.

Permissible temperature for forced lubrication(°C)

Table 4

Viscosity ISO-VG at 40°C mm ² /s(cSt)	Permissible temperature for forced lubrication(°C)			
	Mineral oil		Synthetic oil	
	min.	max.	min.	max.
VG 220	10	80	0	90
VG 320	15	90	5	100
VG 460	20	95	10	105

Forced lubrication:

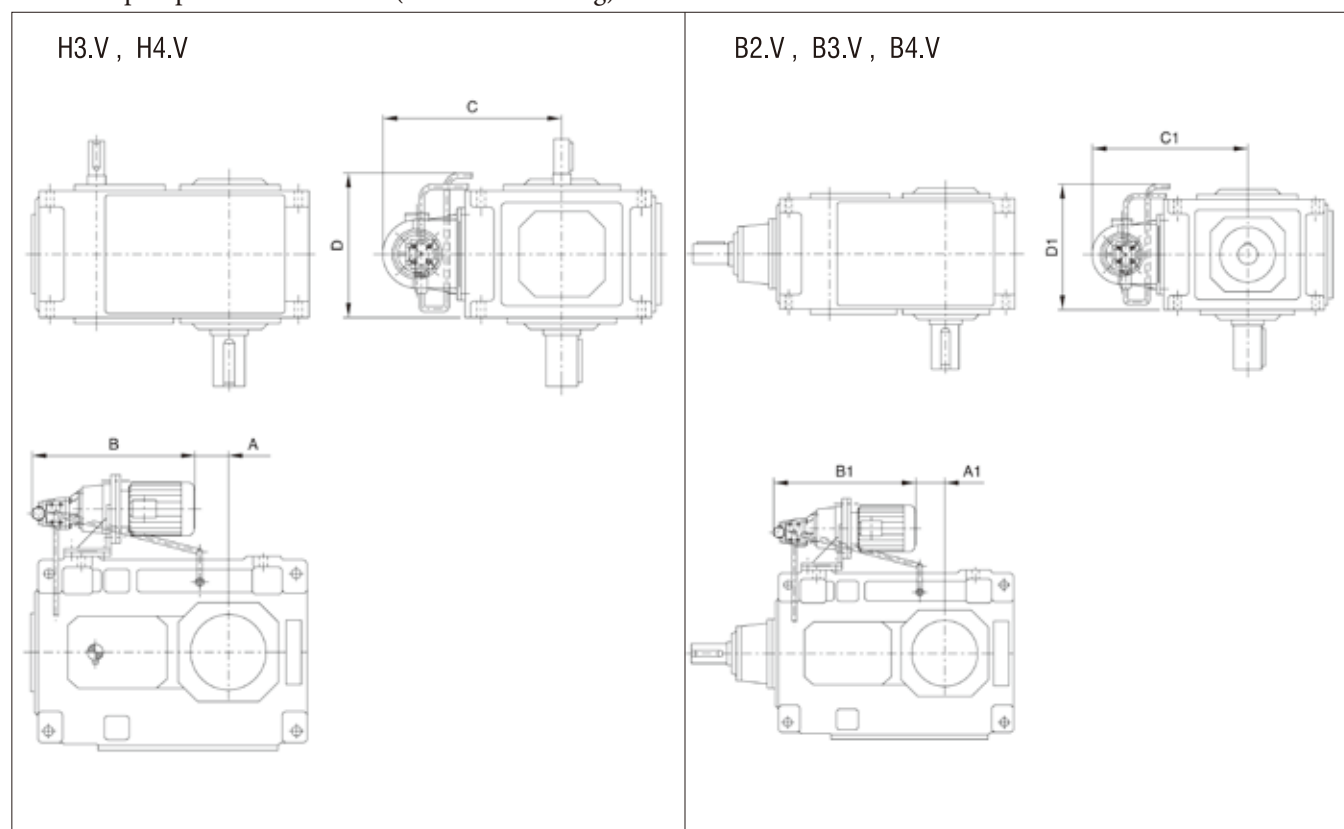

Oil viscosity should not be over 1800 cSt while starting.

The minimum viscosity should not lower than 20 cTs.

If oil temperature is lower than the value which listed on table 4, the oil should be hearted or provide dip-in lubrication.

Motor oil pump forced lubrication(Vertical mounting):
